

SYMPTOM SCREENING CHECKLIST:

Middle and High School Students or Any Person Entering the Building

The person conducting screenings should maintain a six-foot distance while asking questions. Ask each person entering the building the following questions prior to entering the facility or school transportation vehicle.

Anyone showing symptoms of COVID-19 or who may have been exposed to COVID-19 should not be at school.

1. Have you had close contact (within 6 feet for at least 15 minutes) in the last 14 days with someone diagnosed with COVID-19, or has any health department or health care provider been in contact with you and advised you to quarantine?

- Yes > The person should not be at school. The person can return 14 days after the last time they had close contact with someone with COVID-19, or as listed below.
- No > The person can be at school if they are not experiencing symptoms.

2. Since you were last at school, have you had any of these symptoms?

- Fever
- Chills
- Shortness of breath or difficulty breathing
- New cough
- New loss of taste or smell

If a person has any of these symptoms, they should go home, stay away from other people, and call their health care provider.

3. Since you were last at school, have you been diagnosed with COVID-19?

- Yes
 - No
- If a person is diagnosed with COVID-19 based on a test, their symptoms, or does not get a COVID-19 test but has had symptoms, they should not be at school and should stay at home until they meet the criteria below.

Returning to School

A person can return to school when a family member can ensure that they can answer YES to ALL three questions:

- Has it been at least 10 days since the child first had symptoms?
- Has it been at least 3 days since the child had a fever (without using fever reducing medicine)?
- Has it been at least 3 days since the child's symptoms have improved, including cough and shortness of breath?

If a person has had a negative COVID-19 test, they can return to school once there is no fever without the use of fever-reducing medicines and they have felt well for 24 hours.

If a person has been diagnosed with COVID-19 but does not have symptoms, they should remain out of school until 10 days have passed since the date of their first positive COVID-19 diagnostic test, assuming they have not subsequently developed symptoms since their positive test.

If a person has been determined to have been in close contact with someone diagnosed with COVID-19, they should remain out of school for 14 days since the last known contact, unless they test positive. In which case, criteria above would apply. They must complete the full 14 days of quarantine even if they test negative.
